

## 2.8 JTD Gearbox Breather & Reverse Switch location

As promised next time I had to take the Air cleaner assembly off so I could change the fuel filter I would to take a photo of the location of the Gearbox Breather & also the Reversing light switch which was how on closer examination I found the odd looking bleed "nipple" on the clutch slave cylinder as I was preparing to change the brake fluid I would also do the clutch as well. Anyway see the attached pictures for the locations of these two methods of filling the gearbox. If you remove the complete air cleaner assembly & push the large outlet hose coming from the base of air cleaner assembly to one side you will see the clutch slave cylinder directly below that & towards the rear as per the pictures you can see the locations of the Breather & Reverse Switch - which are quite close together

Hope this helps someone who is looking to refill their gearbox.

Cheers 🙌

---

I have recently changed my gearbox oil and while inspecting the various brands noticed that Carlupe 75W80 has the specification API GL4/GL5 so bought this!

I have attached a picture of the breather through which I topped up (the black casting is the gearbox mounting bracket so will aid location) however the airfilter housing needs to be removed first.

PS My van is a 2006 2.8JTD so picture will apply to this model only.
